

Analysis and Sampling Systems in
Emissions, Immissions and
Industrial Hygiene

About Us

Established to work in the development of applications and solutions to safeguard the environment around us, we develop a high technology products and solutions for pollution control.

Continue to invest in innovation to elevate the standards of quality in every single project to reach the satisfaction of our customers is our mission.

X^{EAR} PRO CAL
Calibrator

Manufacturer of sampling and measurement systems in inputs and emissions

Our Partners

madur

madur electronics was founded in 1984 in Vienna, Austria and now is worldwide recognised manufacturer of gas analysis equipment.

At the beginning, it was gathering all the activities of the company, i.e.: sales, production, service, R&D.

After 10 years, in 1994, madur Polska Sp. z o.o. was founded. At the beginning, it was a small R&D group with prototypes' site. During the years, it was more convenient to move the production and service closer to the R&D department, to provide our customers the most advanced solutions, and the fastest possible and the most professional service and technical support.

Since the beginning of 2013 our headquarters is located in Poland.

Our Partners

The automatic DIGITEL aerosol, gas and wet-only samplers represent an impressive synthesis of ecology and economy. They are oriented towards requirements of a long-term intact environment and therefore to a healthy and livable future. Our sensitivity ("sense") towards environmental questions („enviro“) makes enviro-sense a reality and reflects in all our products.

Our Partners

Grimm is the inventor and pioneer of optical dust mass measuring systems for PM10 and PM2.5. Grimm measures not only the dust mass in real-time but also simultaneously the according particle sizes and their distribution in different size ranges. We produce highest accuracy instruments, from handheld, spot measurement to complete stationary systems, measuring from a few Nanometres to large particles. All our aerosol spectrometers and Nano systems are controllable by the intelligent software for easy access and data management.

Our Partners

LNI Swissgas, based in Geneva, Switzerland, is a leading European organisation in gas calibrators, blenders, generators and linearisation systems.

The company develops, manufactures and sells products for Air Pollution Monitoring, Emission & Process, Automotive and Laboratories.

LNI Swissgas maintains ISO 9001 for corporate activities, research and manufacturing. In order to satisfy high metrological requirements, LNI Swissgas has been working since several years with its own accredited ISO 17025 calibration laboratory.
